Optional terminal achievement difference, valued once at the horizon (not shown)
Route A: airflow
Q₀ = 3.6 × occupants × q
θ = 1 − Q₀/(Q₀ + ΔQ)
× addressable fraction
Routes B/C: matched study
θ = 1 − RR
applied to the matched
baseline endpoint
Physical change
ΔE = baseline burden
× cohort × θ
(episodes or absent days)
Valuation
healthcare + caregiver
+ λ·QALY (optional)
or absence value
Costs
capital × CRF(r, L)
+ annual operation
(annual service cost)
Decision
NPV = PV(values) − PV(costs)
thresholds; PSA:
CEAC, EVPI, EVPPI
