Supplementary Table S1. CHEERS 2022 checklist

What would we need to know? Probabilistic and value-of-information analysis for school clean-air investment decisions

This is a methodological demonstration with hypothetical inputs in synthetic monetary units. Where a CHEERS 2022 item presumes an applied evaluation, the entry states how the item is addressed or why it does not apply.

No.	Item	Location / response
1	Title	Title page. Identifies a cost–benefit framework with probabilistic and value-of-information analysis; “demonstration” is stated in the abstract.
2	Abstract	Structured abstract.
3	Background and objectives	§1
4	Health economic analysis plan	No pre-registered plan: methodological study. The analysis scripts fix every reported analysis (Declarations).
5	Study population	§2.1, §2.3: one stable cohort of 25 pupils (hypothetical).
6	Setting and location	§2.1: generic classroom; no jurisdiction (synthetic MU).
7	Comparators	§2.1: no added intervention.
8	Perspective	§2.1: set by the valuation scope (child health only; plus caregiver time).
9	Time horizon	§2.1, Table 1: five years.
10	Discount rate	§2.1, Table 1: 3% for costs and outcomes.
11	Selection of outcomes	§2.2: infection episodes (Routes A and B) or absent days (Route C); QALYs reported separately.
12	Measurement of outcomes	§2.2–2.3: assumed, not measured; no study supplies the demonstration inputs.
13	Valuation of outcomes	§2.2: healthcare resources, caregiver time, optional monetary value of health (λ).
14	Measurement and valuation of resources and costs	§2.2: capital annualised with the capital-recovery factor, plus operating cost.
15	Currency, price date and conversion	Synthetic MU; not applicable.
16	Rationale and description of model	§2.2, Figure 1.
17	Analytics and assumptions	§2.2, §2.4–2.5.
18	Characterising heterogeneity	Not analysed; the framework assumes one homogeneous cohort

	No.	Item	Location / response
			(§4.4).
	19	Characterising distributional effects	Not analysed.
	20	Characterising uncertainty	§2.4–2.5, Tables 2–3, Figures 2–4.
	21	Approach to engagement with patients and others affected	None: methodological study.
	22	Study parameters	Table 1.
	23	Summary of main results	§3, Table 2.
	24	Effect of uncertainty	§3.2–3.4, Table 3.
	25	Effect of engagement	Not applicable.
	26	Study findings, limitations, generalisability and current knowledge	§4.
	27	Source of funding	Declarations.
	28	Conflicts of interest	Declarations.
