Optional terminal achievement difference, valued once at the horizon (not shown)
Route A: airflow
Q_0 = 3.6 × occupants × q
θ = 1 − Q_0/(Q_0 + ΔQ)
× addressable fraction
Routes B, C: study
θ = 1 − RR, applied
to the matched
baseline endpoint
Physical change
ΔE = baseline burden
× cohort × θ
(episodes or
absent days)
Valuation
healthcare + caregiver
+ λ·QALY (optional)
or absence value
Costs
capital × CRF(r, L)
+ annual operation
(annual service cost)
Decision
NPV = PV(values)
− PV(costs);
thresholds; PSA:
CEAC, EVPI, EVPPI
